

Workshop Capability Statement

RUS Mining is a contracting company operation in underground coal mines throughout Australia. To support our people at mines, RUS operates a magnificent workshop complex in which machines and equipment used at the mines are repaired, serviced, or overhauled. The workshop complex is located on 4 acres of land at Rathmines NSW, close to the F1 Freeway. It is capable of undertaking rebuilds and repairs to most equipment used underground. The workshop comprises two bays, each approximately 60m X 20m, placed side by side, under the one roof. One bay is serviced by a 40 tonne overhead crane, the other by a 10 tonne unit. Contained in one bay is a compliant paint booth. 1000v power is available for the testing and running of miners, shuttle cars etc.

Equipment repaired or overhauled within the workshop includes:

- Diesel man transporters
- Diesel LHD's
- Track mounted drill rigs
- Jeffrey miners
- ABM miners
- Joy miners
- Shuttle cars
- Breaker feeders
- Breaker line supports
- Longwall supports
- Conveyor components

RUS Mining extends to you an invitation to make use of the facilities at this workshop and would welcome enquiries to repair or overhaul your equipment.
